

Oleksandr Kalita

AI Automation Developer

I automate business processes and integrate AI into everyday workflows, turning manual, repetitive work into reliable systems.

✉ oleksandr.kalita.dev@gmail.com Warsaw, Poland · Remote

SUMMARY

Computer Engineering graduate specializing in workflow automation and AI integration. I design and build automation systems, AI-powered tools, and integrations tailored to different business needs - from document processing and semantic search to chatbots and internal reporting systems. Comfortable working across the full automation stack: workflow engines, AI APIs, vector databases, and integrations with everyday business tools. I focus on understanding the actual problem first, then building whatever combination of automation and AI solves it - fast and reliably.

PROJECTS

File Archiver - AI-Powered File Archiving System DIPLoma PROJECT

Problem: Manual document search and organization wastes hours and loses context.

Solution: A Telegram bot plus n8n workflows where AI identifies each file's content, generates a bilingual description, stores it on Google Drive, keeps metadata in Notion, and enables semantic search through Pinecone.

Result: Search by content instead of filename - results in seconds instead of minutes.

n8n OpenAI Anthropic Mistral Pinecone Notion API Google Drive API

Wedding Website with RSVP Automation

Problem: Collecting guest responses manually is inconvenient and data gets lost.

Solution: A website on Cloudflare Pages with an RSVP form connected to an n8n webhook, sending instant Telegram notifications on every submission.

Result: Full end-to-end delivery - frontend plus backend automation, deployed and used for a real event.

Cloudflare Pages n8n Telegram Bot API HTML/CSS/JS

Notion Finance Assistant

Problem: Manually categorizing daily expenses is repetitive and time-consuming.

Solution: n8n and AI automatically categorize transactions and log them into a structured Notion table.

Result: An always up-to-date finance table with zero manual entry.

n8n Notion API AI classification

Automated Work Schedule Generator

Problem: Manually building shift schedules while accounting for staff preferences and constraints takes hours every week.

Solution: An n8n-based system that factors in staff conditions, preferences, and constraints to automatically generate a finished schedule.

Result: A schedule generated in minutes instead of an hour of manual coordination.

n8n Google Sheets AI logic

SKILLS & STACK

Automation & Orchestration

n8n, workflow design, webhook integrations, error handling, multi-agent routing

Data & Knowledge Systems

Pinecone (vector search), Google Drive API, Notion API, vector embeddings

Web Development & Deployment

HTML/CSS/JS, Node.js, Cloudflare Pages, Railway

AI / LLM Integration

OpenAI API, Anthropic Claude API, Mistral API, prompt engineering, RAG / semantic search

Bots & Messaging

Telegram Bot API, webhook notifications

Marketing Tech

Google Ads, Facebook Ads, performance analytics

EDUCATION

Yuriy Fedkovych Chernivtsi National University - Bachelor's Degree, Software and Algorithmic Support for Computer Systems

Diploma thesis: development of an AI-powered file archiving and management system using n8n workflow automation, vector search (Pinecone), and cloud storage integrations (Google Drive, Notion).

LANGUAGES

Ukrainian - Native **English** - Professional working proficiency **Polish** - Elementary proficiency
